

What makes Labrador different

We enable Corporations to eliminate risk, and to reduce frustration and cost in the production of their regulatory compliance. Our modern, easy to use tools simplify the preparation of EDGAR and XBRL filings, whilst our proprietary, SEC approved layouts reduce pagination and please analysts and investors.

Labrador was created in 1992. We have offices in Atlanta, New York and Paris, and work with 90+ clients.

Process	The Labrador difference
Typesetting	We proofread Word and Excel files, and flag spelling mistakes and incorrect or poor grammar. Save time proofreading, and make fewer corrections.
Corrections	Copy/paste, insert riders, correct text and tables immediately using eXchange, our online corrections platform. Output clean and blackline PDFs at the click of a button - no more handwritten mark-ups, no more waiting, no more printer errors. Modernize production, improve accuracy and reduce risk.
XBRL	Our intuitive, easy to use online software automates the creation of XBRL for filing with the SEC. Real-time validation, no more "corrections blackout periods". Modify your document up to a matter of hours before filing.
Layout	Our proprietary SEC approved layouts make your documents considerably smaller, and easier to read. Reduce environmental impact, realize considerable cost savings, and improve analyst and investor sentiment.
Security	Files are stored in a data cold site with three uninterruptible power supplies, and our eXchange platform is as robust as the most high security websites. Your data is safe, and you benefit from a perfect audit trail.

Save time, modernize your process and save at least 10% on your legacy financial printer invoice, guaranteed
