

XBRL

For too long, SEC disclosure has been frustrating experience for all involved, and XBRL has made things even worse. Legacy processes make the production of SEC filings inefficient and fraught with risk.

Labrador offers modern, common-sense solutions to make your SEC disclosure less painful for your corporation, and more useful for your readers.

Pain Point	Labrador Solution
Preparation of XBRL takes too long.	Our intuitive software includes an Excel overview of your filing and the reliability of your taxonomies. Save time and increase accuracy.
Lack of resources to manage XBRL throughout the busiest reporting periods of the year.	Our US based CPAs support you in the preparation of your XBRL filing, and seamlessly pass control back to you as appropriate.
XBRL blackout periods prohibit your ability to make necessary changes and can delay SEC filing.	Our web based XBRL solution offers real-time validation and intuitive, automated tagging. No more wasted time, no more filing delays.
Reinventing the wheel for each filing...	Our XBRL solution acquires intelligence from your filings for faster, more accurate results next time.
Your XBRL burden increases with each phase.	We automatically generate extension taxonomies and support full XBRL block and detailed notes tagging.
You lack certainty in your XBRL tagging.	We automatically match filing line items to US-GAAP or Mutual Fund Risk/Return XBRL concepts
Legacy production processes create risk of confidential information being leaked without you knowing when, or how.	Your web XBRL files are secured in a data cold site from creation to EDGAR filing. A precise audit trail shows exactly who accessed your documents, when and for how long.

Modernizing your SEC disclosure workflow with Labrador's easy to use XBRL tools:

- ✓ Saves time and shortens production cycles
- ✓ Eases the frustration experienced by SEC reporting teams
- ✓ Reduces your "financial printer" expenditure

You will be astounded by how simple and secure XBRL can be. For more information or an interactive demonstration, please contact:
